EDUCATION

Software Engineering Student
Al Azhar University

*2020 - Present*

EXPERIENCE

Domino ICT
Workplace/Company

09/2022 - 05/2023   *Gaza - Palestine*

Achievements/Tasks

- Developed an education platform that allowed students to book courses with teachers. students could pay for the courses using Thawani, a secure payment method. We used Firebase for real-time messaging between students and teachers. Additionally, we implemented a map feature so that students could easily find teachers near their location .
- I worked on an exciting project called Vela. It was a messaging platform that allowed users to send messages and take actions like deleting or replying to messages in real-time, thanks to the implementation of Socket io .
- Additionally, we integrated Jitsi to enable smooth audio and video calls within the platform. This allowed users to connect with each other seamlessly and have virtual face-to-face conversations
- I was involved in the development of a delivery order platform tailored for Saudi Arabia. This platform allowed users to effortlessly create delivery orders and choose from nearby delivery providers displayed on a map interface.

SKILLS

HTML   CSS   Bootstrap   Tailwind

JavaScript   React Js   Next Js   Node Js

Nest Js   Express Js   MongoDB   MySQL

Sass   Typescript   React native

PROJECTS

Academiatouna (09/2022 - 12/2022)

- The website was designed to cater to students of different classes and levels, along with a study division for specialized subjects .
- One of the key features of the website was the ability for students to easily select their class and level. Once selected, students gained access to a range of courses tailored to their specific educational needs. These courses were available in various formats, including video lessons for easy viewing .
- To assess students' knowledge and progress, we integrated both PDF and multiple-choice questions (MCQs) exams. These exams helped students evaluate their understanding of the material and allowed teachers to track their performance .

News (06/2023 - 07/2023)

- I contributed to the development of an engaging news website that aimed to deliver diverse content to its audience. The website encompassed a versatile platform where news articles and videos could be published, providing users with both written and visual updates.

Bus ticketing (08/2023 - 08/2023)

- working on a bus ticketing system that streamlined the process of booking bus tickets and managing bus trips.
